The COVID-19 pandemic accelerated the pace and progress of digital disruption by an estimated seven years<sup>1</sup>, rapidly changing the way we use and consume cloud resources. As businesses adapt to a post-pandemic world, there's no doubt that long-term adoption of remote working and digital touchpoints will be critical. Even so, factors like complexity, budget restraints, and concerns about downtime are delaying cloud adoption in many companies.

Kyndryl Cloud Services for Google Cloud VMware Engine can help you migrate and manage your workloads and deploy applications across Google Cloud data centers. We offer lifecycle support across Day 0, Day 1 and Day 2 services to help you manage and modernize your applications through integration with Google Cloud.
