

Fuel SAP transformation through modernization

Kyndryl shares SAP insights and inspiration for digital enterprise transformation

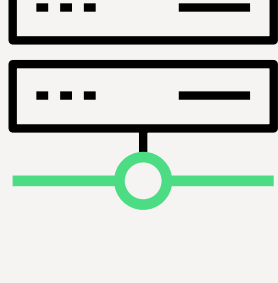

How simplifying and optimizing your SAP landscape with cloud-native solutions and services can boost your business

Challenge

Challenged by technical debt and transforming your SAP landscape?

Expertise

Kyndryl has 30+ years of experience managing Fortune 100 company mission-critical SAP environments.

Examples from Kyndryl's own successful SAP transformation

Kyndryl was spun off as an independent company in 2021, inheriting a complex set of unaligned legacy systems, data silos and tools. These would not support our long-term vision.

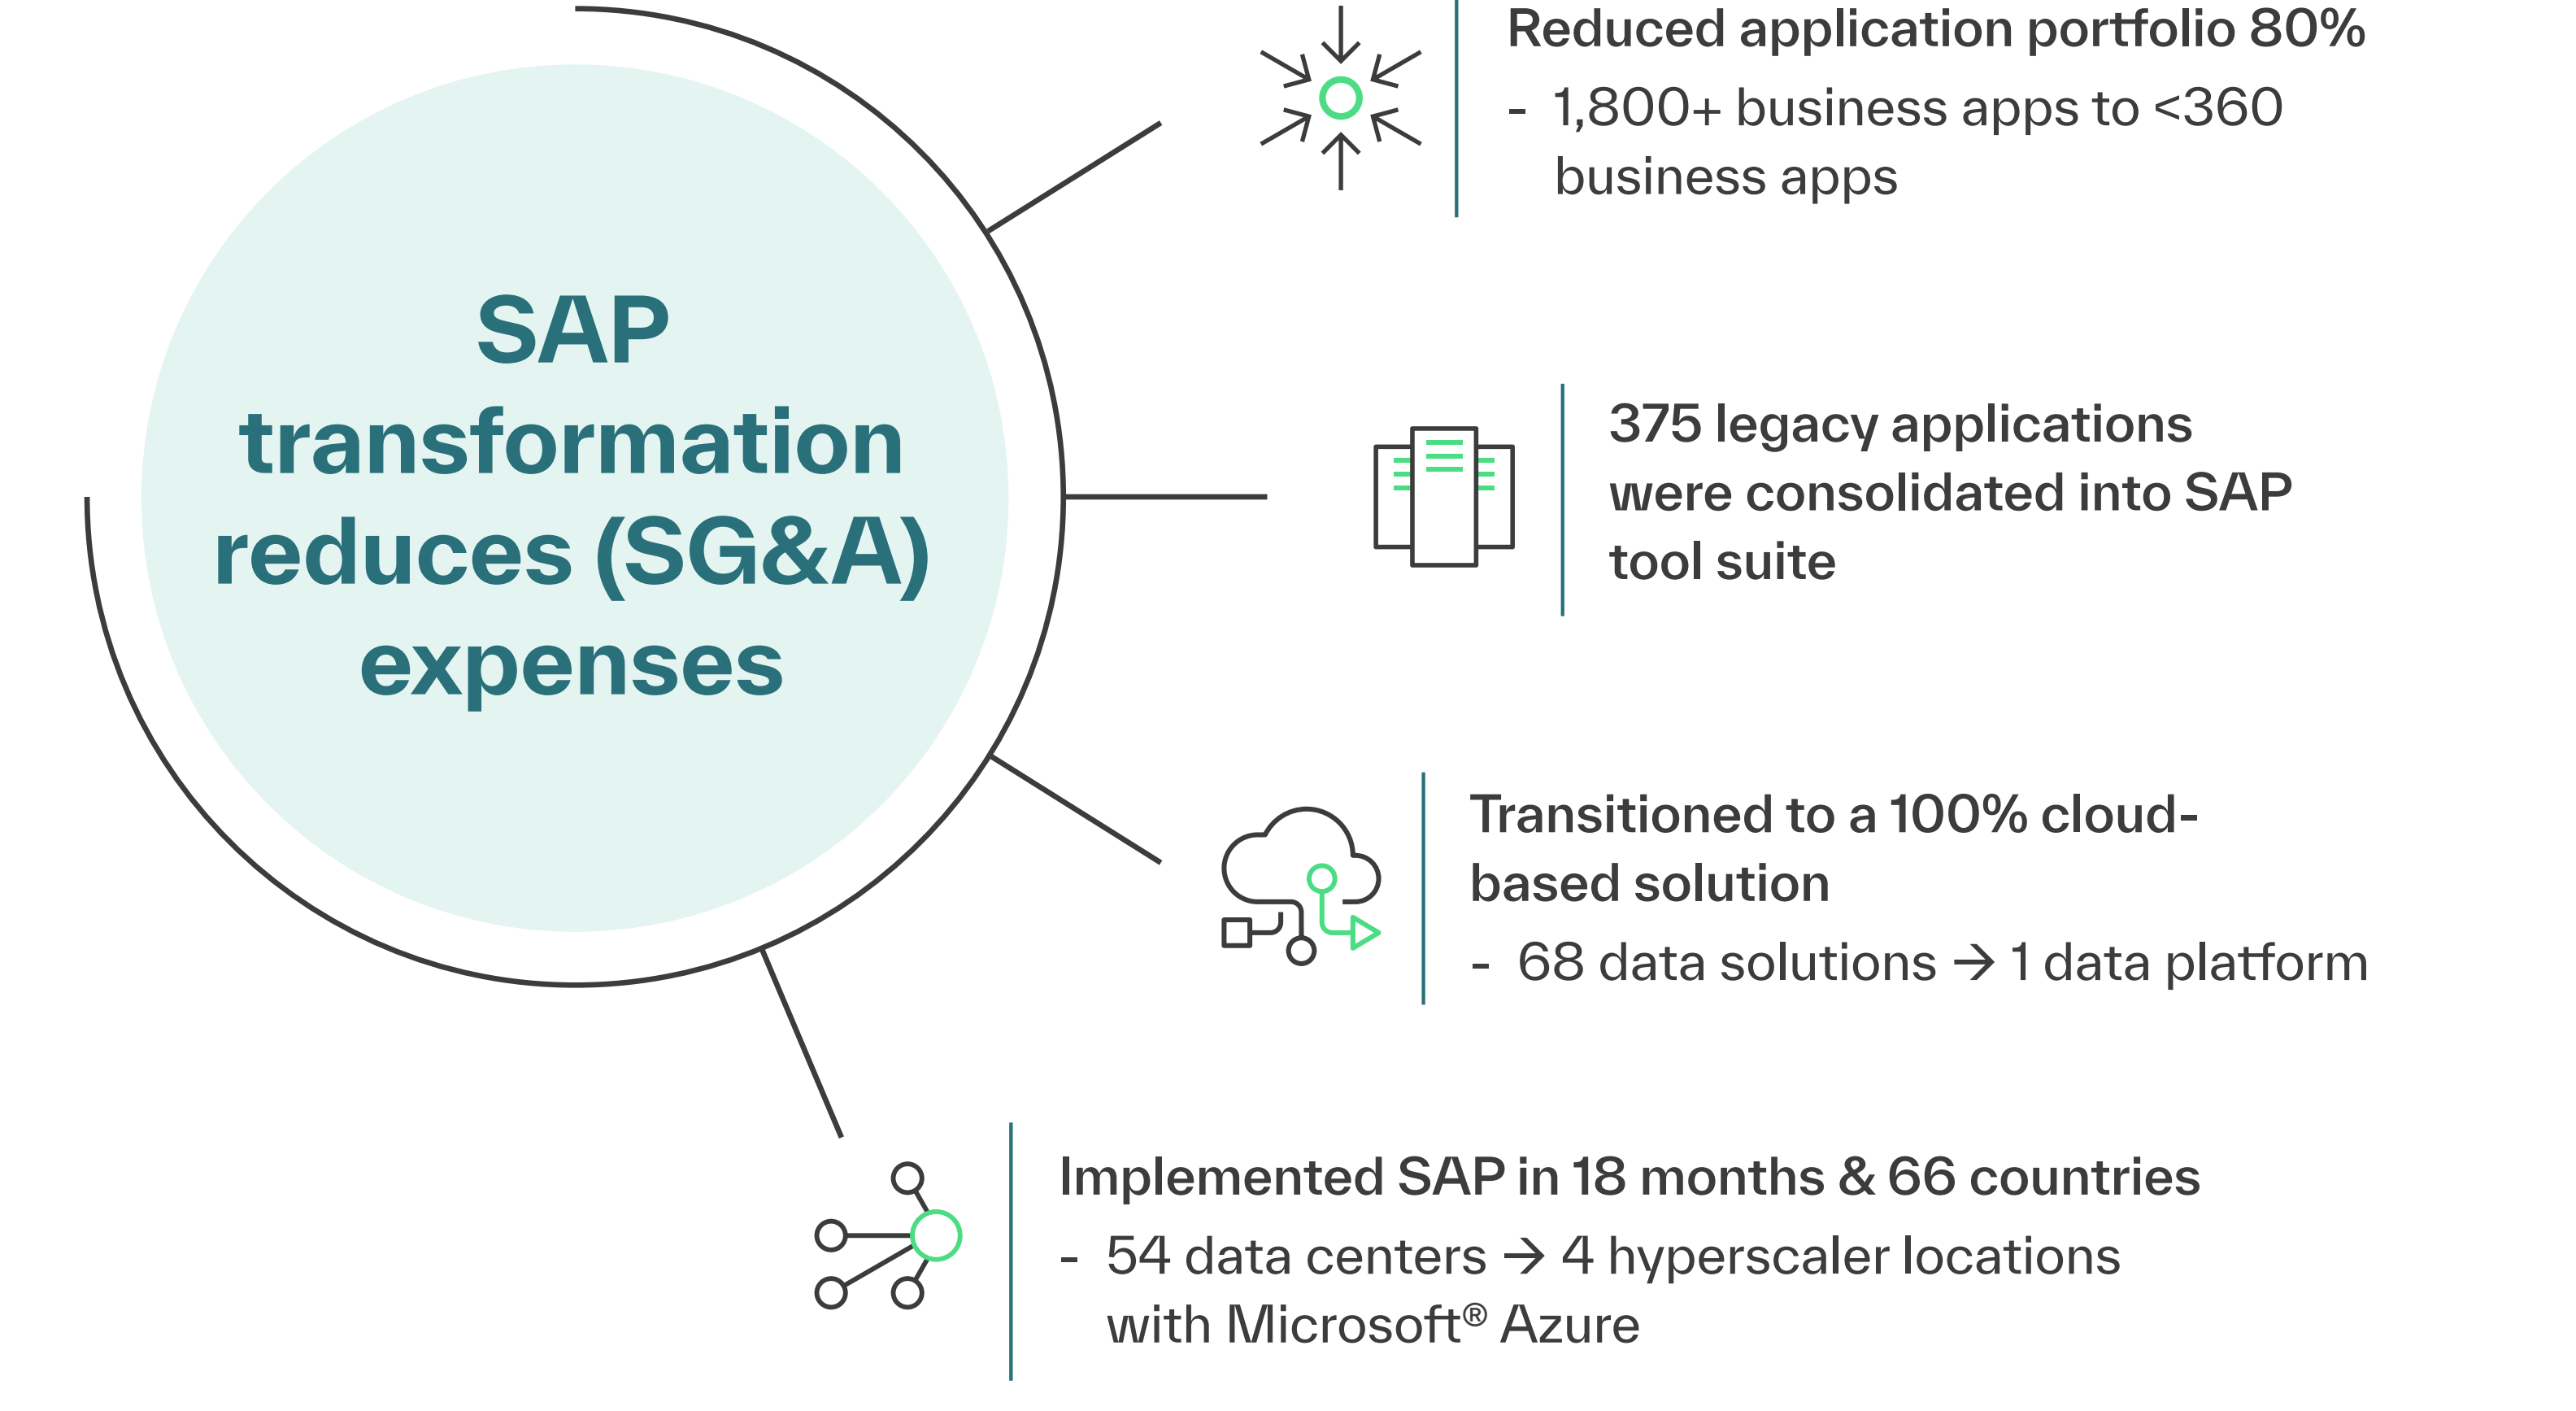

Kyndryl's SAP transformation story

Pivoted to an agile, cost-effective environment

Kyndryl unified its organization on common platforms and created a far leaner and less costly infrastructure

This **SAP transformation** will play a major role in reducing our company's selling, general and administrative expenses (SG&A) by USD **\$200** to **\$300** million over time.

SAP Business Technology Platform (BTP) extends SAP applications, integrates and connects landscapes.

Kyndryl provides holistic data strategies to migrate your data, build new data products and extend AI/ML usage across your organizations.

By integrating business processes and data, we simplify customer interactions and reduce the chances of systems and data disconnects.

Integrated data seamlessly between SAP and non-SAP environments

Deployed S/4HANA which has close to 150 application integration points created with BTP

Customers today need greater business success but face more challenges

Kyndryl's technology transformation along with our simplified SAP transformation aligns with 3 mission-critical outcomes: modernization, innovation and security.

01

Modernize

- Be data-centric. Business data is your key enterprise asset.
- Shift to platforms vs. single solutions. This helps sunset hundreds of applications.
- Automate. Focus on infrastructure-as-code over manual configuration.

02

Innovate

- Differentiate. Improve employee experiences for better customer experiences.
- Stay competitive. Identify the talent and skillsets you need to move ahead.
- Embrace new technologies. Use generative AI for competitive advantage.

03

Secure

- Build cybersecurity. Progress into a zero-trust environment.
- Protect applications and data. Your data and reputation are valuable.
- Standardize governance. Establish organization-wide compliance process.

Five tips for successful business transformation from Kyndryl

1

Standardize business platforms and agile delivery

2

Streamline support services and device management

3

Establish an organization-wide governance model

4

Create a digital first-mindset

5

Adopt strong change management processes

Modernize, simplify, automate and secure. Kyndryl can help.
