

Driving transformation with Kyndryl Managed Network Services

The fast-moving networking landscape contains opportunities to modernize and transform.

Enterprise networking challenges

- Growing complexity of the network ecosystem
- Rising demands for availability and reliability
- Vast amounts of distributed data
- Sophisticated cybersecurity threats
- Shortages of resources and skills

How Kyndryl Managed Network Services can help

- Reduce complexity and increase operational agility
- Deliver reliable network performance
- Integration of IT and OT systems for seamless operations
- Improve your security posture
- Support network infrastructure with Kyndryl's engineering expertise and a global footprint of Network Operating Centers (NOCs)

40 billion+

The number of IoT devices is forecast to more than double to 40 billion by 2030.¹

39%

Only 39% of IT leaders say their infrastructure is ready to manage future risks.²

64%

64% of CEOs are concerned their IT is outdated or close to end-of-life.²

Components of Kyndryl Managed Network Services

Kyndryl provides a collection of unified network services.

	Campus LAN and Wireless	WAN	Cloud Networking	Data Center
Network and Edge services	NextGen wireless and campus LAN, including large scale IoT connectivity, with WiFi and Private LTE/5G consulting and managed services	Optimized Wide Area Networking and cloud connectivity, with SD-WAN and SASE consulting and managed services	Enterprise network architecture built on cloud environments, including public cloud and hybrid multi-cloud consulting and managed services	Datacenter and private cloud network modernization based on software-defined architecture, with consulting and managed services
Kyndryl Managed Network Services	Discovery · Event Management · Network Inventory · Log Management Configuration Management · Security · Performance Management			
	Workflows · Automation Library · Insights · Data Visualization and Reporting			

Harness the benefits of automation and AI

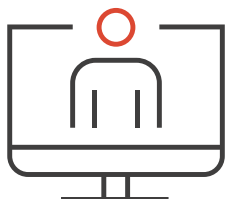

With the AI-powered Kyndryl Bridge platform, Kyndryl Managed Network Services strategically integrates AI into network automation.

- Improve network's reliability and availability
- Keep systems running optimally
- Support adherence to security processes and compliance with regulations
- Improve transparency and visibility across regions and business units
- Predictive analytics to improve network's performance

Simplify complexity

Kyndryl Managed Network Services brings your network services together into a unified ecosystem with centralized management, saving time and costs.

Centralized management

- Save time by eliminating the need to juggle multiple vendors
- Make transitions, such as those from mergers, acquisitions, and divestitures, more effective
- Keep expenses predictable

Unified ecosystem

- Enhance your network's capabilities by integrating technologies such as private wireless, LAN, WAN, data center, and cloud networks
- Enable faster and more informed decision-making with better visibility
