Kyndryl's Goals

Net-zero greenhouse gas emissions by **2040**

100% IT e-waste diversion from landfills by **2030**

30% reduction in water consumption in water-stressed areas by **2030**

100% purchased electricity obtained from renewable sources by **2030**

How Can Suppliers Contribute?

Science-Based Targets

By setting and validating greenhouse gas targets that align with the Paris Agreement, suppliers can contribute to limiting global warming to 1.5°C above pre-industrial levels. This alignment helps suppliers adhere to sustainability standards and practices, which can lead to a reduction in overall carbon emissions and can mitigate the effects of climate change.

Energy Efficiency:

Utilizing advanced energy management technologies, such as smart grids and energy-efficient lighting, can lead to reductions in energy consumption and operational costs. Implementing energy-efficient technologies like LED lighting, high-efficiency HVAC systems, and energy management software can help reduce energy usage and lower greenhouse gas emissions, which may lead to a more sustainable and cost-effective operation.

Renewable Energy:

Investing in renewable energy projects, such as solar, wind, and bioenergy, can help reduce your carbon footprint. Transitioning to renewable energy sources can promote the development of sustainable energy infrastructure and support the global shift towards cleaner energy. This investment can benefit the environment and position you as a responsible, forward-thinking organization.

Kyndryl's Accomplishments

Our net zero targets are validated by the Science Based Targets initiative (SBTi)

Certified our integrated Environmental and Energy Management System against ISO 14001 and ISO 50001

Achieved an 8% reduction in scope 1 and 2 (market based) GHG emissions, against fiscal 2023 baseline

Diverted 99.99% of our IT e-waste from landfills.
